

**78598 – 224 grams**  
**Vitrophyric Ilmenite Basalt**

Figure 1: Two views of 78598. Cube is 1 cm. top is S73-21770; bottom is S73-21771.

### **Introduction**

Although 78598 is a high-Ti basalt, it has lower Ti than most others and is somewhat like basalts from Apollo 11. It is a dense, light grey rock with a few large vugs (figure 1). This interesting rock has not received enough attention.

78598 is from a rake sample collected as part of a large comprehensive sample at station 8, Apollo 17.

### **Petrography**

78598 has a very interesting texture (figure 4). Ilmenite and Ca-rich pyroxene form a fine net in a glassy matrix. Warner et al. (1978) termed 78598 a hypocrystalline ilmenite basalt and gave the composition of the fine-grained pyroxene (figure 3). Olivine and plagioclase failed to nucleate.

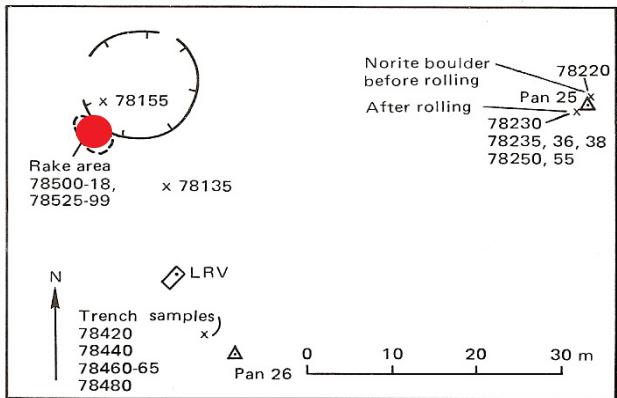

Figure 2: Location where 78598 was found.

## Chemistry

Warner et al. (1975) and Neal (2001) have published analyses of 78598 (table 1). These analyses are not in agreement. Note the very low Cr and V content reported by Neal.

## Processing

There are 4 thin sections.

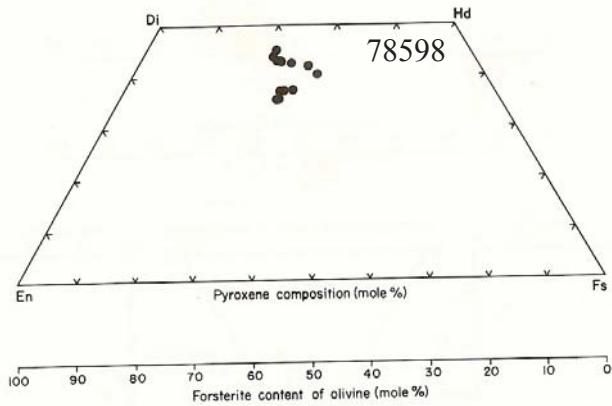

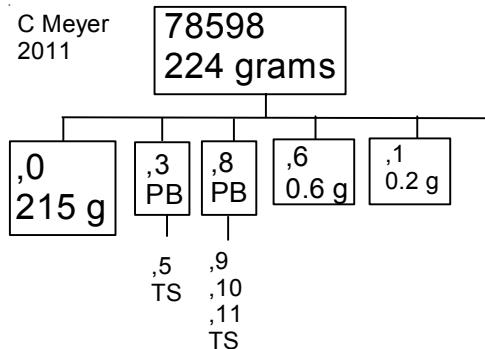

Figure 3: Composition of pyroxene in 78598 (Warner et al. 1978).

## Mineralogical Mode

|             | 78598 | 78586 | 78587 |
|-------------|-------|-------|-------|
| Olivine     | --    | 4.6   | 8.1   |
| Pyroxene    | 49.7  | 44    | 41.8  |
| Plagioclase | --    | --    | 27.6  |
| Opaques     | 11.8  | 15.3  | 16.7  |
| Silica      | --    | --    | 4.8   |
| Meostasis   | 38    | 36.2  | 0.6   |
